

# Riley Jones

**Network and Systems Administrator at Heinen's Corporate | CCNA | PCNSA | WCA | Security+**

Stow, OH 44224 | 3302176328 | [jrileychristopher@gmail.com](mailto:jrileychristopher@gmail.com)

## Professional Summary

---

Driven by a passion for technology and a commitment to service, I am dedicated to using my skills and experience to make a meaningful impact on others. With proven success in delivering results and a proactive approach to challenges, I consistently strive to drive positive impact in my role as an IT Specialist.

## Work Experience

---

### Network and Systems Administrator

**HEINEN'S** | Warrensville Heights, OH

June 2026 to Present

Recently transitioned into a network role, where I am leading a project to standardize network infrastructure across all sites. This includes overseeing the migration from Cisco Meraki to HPE EdgeConnect SD-WAN, switches, and access points. This migration requires extensive changes to our network architecture for both interoperability with non-migrated sites and for other large scale changes. I managed extensive equipment testing within our Proof-of-Concept and lab environments to ensure proper functionality before deployment. During the course of this project I rearchitected and standardized the following at all sites including our Datacenter: firewall rulesets, subnets, VLANs, overlay topologies, Traffic Shaping, IPS, Port Forwarding, and Routing.

### IT Specialist

**Heinen's** | Warrensville Heights, OH

March 2024 to June 2026

Skilled in a broad spectrum of IT responsibilities, encompassing networking, Windows server implementation and management, NVR configuration, Endpoint/Intune management, in-depth product research, and successful project execution.

I have extensive experience in Active Directory, Entra ID, SCCM (Microsoft Endpoint Configuration Manager), Intune, Portnox (Cloud RADIUS), Aruba Wireless/Switching, Silverpeak SD-WAN, Cisco Meraki, Arista CLI, Palo Alto, VMware vSphere, and PowerShell scripting/automation.

Throughout this role, I have built out and transitioned workloads from SCCM to Intune, implementing Configuration Policies, Endpoint Security policies, Windows Updates for Business, Applications Installations, Company Portal, and Autopilot. I designed and led the project to create a comprehensive Intune environment for managing Windows workstations and mobile devices (iOS and Android).

I facilitated the implementation of a new cloud RADIUS system for wireless device management, ensuring secure and efficient connectivity.

Recently lead testing for a VoIP rollout at all sites to replace an aging 20+ year old system. During this project I implement segmentation in the form of a voice VLAN.

## Desktop Support Technician

**Heinen's Grocery Store** | Warrensville Heights, OH

August 2022 to March 2024

Experienced in various IT tasks, including imaging devices, server support, NVR management, troubleshooting complex tickets, providing desktop support, resolving mobile device issues, and providing meeting support.

In this role, I have hands-on experience with Active Directory, SCCM (Microsoft Endpoint Configuration Manager), Cisco Meraki, MobiControl, VMware vSphere, and PowerShell Scripting.

I have obtained my CCNA and Security+ while in this role.

## Technical Services Summer Intern

**Heinen's Grocery Store**

May 2022 to August 2022

## Customer Service Associate and Shift Lead

**Heinen's Grocery Store** | Twinsburg, OH

July 2017 to May 2022

Performed tasks related to customer service including assisting customers, responding to customer inquiries and complaints, processing returns and exchanges, responding to incoming phone calls, and providing instruction to cashiers on difficult and complicated sales.

Performed tasks related to shift leading including directing and supervising employees engaged in sales or in performing services for customers, assigning employees to specific duties, and managing the workflow/placement of employees (generally around 15 to 25 employees) of the front end department based on the needs of the business.

Additionally a few other tasks were performed in the position, including training dozens of new cashiers on the POS, ordering and inventory taking of supplies for the front-end department on a weekly basis, and creating daily crew sheets to aid in the process of shift leading.

## Education

---

### BS, Computer Engineering Technology/Technician (Bachelor of Science)

Kent State University | Kent, OH

January 2021 to May 2024

### BA, Political Science and Government (Bachelor of Arts)

Kent State University | Kent, OH

August 2019 to May 2023

## Skills

---

VMware vSphere   Mobile Devices   Technical Support   Cisco Meraki   Computer Hardware   Active Directory   Microsoft Windows   Networking   SCCM   Computer Hardware Troubleshooting   TCP   Microsoft Windows Server   Mobile Device Management   Desktop Support   Azure   Linux   Operating Systems   Network Support   Microsoft Endpoint Configuration Manager   Information security   Powershell   Software Troubleshooting

## Certifications and Licenses

---

### **Microsoft 365 Certified: Fundamentals**

January 2024 to Present

### **Microsoft Certified: Azure fundamentals**

January 2024 to Present

### **Aruba Accredited SD - WAN Expert**

January 2025

### **CompTIA Security+**

January 2024 to January 2030

Recertified in 7/2026

### **CCNA**

May 2023 to June 2029

### **Wireshark Certified Analyst**

January 2026 to January 2029

### **HPE Aruba Networking Certified Associate - Campus Access**

June 2025 to June 2028

### **Palo Alto Networks Certified Network Security Administrator**

October 2024 to October 2026

### **HPE Aruba Networking Accredited SD-WAN Professional**

December 2024 to December 2025

### **Microsoft 365 Certified: Endpoint Administrator Associate**

March 2024 to March 2025

Imaging, Intune and Autopilot Management

## Additional Information

---

Authorized to work in the US for any employer

## Home Lab

- Within my Home Lab, I've established a robust infrastructure consisting of multiple segmented networks interconnected by a pfSense Firewall. Multiple Switches are also included in this setup enabling many devices to connect. Firewall Rules govern traffic flow between the separate subnets. This includes a separate subnet for my external-facing and internal VMs on my Proxmox Cluster. This lab also includes a GNS3 VM that virtualizes an HA pair of Palo Altos (View the Topology for further details). Multiple Servers are running on a highly available five node Proxmox Cluster. The storage for this cluster is provided by a dedicated TrueNAS server allowing for shared storage by all nodes. VMs run directly on this storage as well as allowing for weekly backups. A few of VMs include web servers hosting components of the rjserver.net domain including my personal resume website - [www.rjserver.net](http://www.rjserver.net) - via Cloudflare Tunnels. Some servers are also hosted via cloud providers. In order to allow for CI/CD, the code for my websites is hosted in my personal GitHub repository and allows for updating the website's code from anywhere. Some other VMs/Containers include Home Assistant, GNS3, Pi Hole for DNS, Apache Guacamole, Ansible, Grafana, and a Monitoring docker container called Kuma.

## CET Capstone Project - Kent State University

- SecureBox: AI Facial Recognition Mailbox System for Keyless Access
- (Jan 24 - May 24)
- The AI Facial Recognition Mailbox aims to eliminate traditional key-based access to apartment mailboxes by implementing a secure and convenient facial recognition system. It also demonstrates the ability for artificial intelligence and machine learning technology to be easily and cheaply implemented in a multitude of designs, processes, and projects. In any process that requires two-factor authentication this facial recognition and machine learning technology can be implemented. The Raspberry Pi interfaced with three peripherals including a 1080p webcam, a number pad, and a keyboard/mouse to interact with the OS. Its GPIO pins are connected to the two relays supplying 5V power to each relay along with output on Pins 15 and 18 to supply a high or low to activate the solenoid locks when needed by the script running. Each relay interfaced with a 12v power supply and a solenoid lock to allow for opening/unlocking for each mailbox in our design. The facial recognition program design involved using an OpenCV module for our Python scripts. OpenCV allowed us to easily implement Machine Learning into our facial recognition program in order to analyze datasets of faces. Three separate python scripts were used. One script allowed for you to easily obtain headshots of individuals by using the connected webcam. These headshots were necessary to take for use in the machine learning model of our facial recognition system. After utilizing this headshot script, another python script is then used to train the program to identify faces utilizing machine learning. Once these two steps are completed a modified python script from the facial recognition repository is then used to identify faces and open/close the locks as long as the correct face and pin are provided to the program.
